No. 73. Records of German Field Commands: Divisions (328th-369th), Part XIII

National Archives and Records Service
General Services Administration

Washington: 1976

This finding aid has been prepared by the National Archives as part of its program of facilitating the use of records in its custody.

The microfilm described in this guide may be consulted at the National Archives, where it is identified as Microfilm Publication T315. Those desiring to purchase microfilm should write to the Publications Sales Branch (NEPS), National Archives (GSA), Washington, DC 20408.

Some of the papers reproduced on the microfilm referred to in this and other guides of the same series may have been of private origin. The fact of their seizure is not believed to divest their original owners of any literary property rights in them. Anyone, therefore, who publishes them in whole or in part without permission of their authors may be held liable for infringement of such literary property rights.

The Guides to German Records Microfilmed at Alexandria, Va. constitute a series of finding aids to National Archives microfilm of seized records of German central, regional, and local government agencies and of military commands and units, as well as of the Nazi Party, its formations, affiliated associations, and supervised organizations. The records described in the guides were created generally during the period 1920-45.

The guide series was initiated by the microfilming project of the Committee for the Study of War Documents of the American Historical Association (AHA) in cooperation with the National Archives and the Department of the Army. With the termination of AHA participation in July 1963, the National Archives assumed sole responsibility for the reproduction of records and the preparation of guides.

This guide is one of many in the series describing the records of the German Army field commands that have been arranged by unit and filmed in discrete microfilm publications according to their military echelon as follows: Army Groups (NARS Microfilm Publication T311), Armies (T312), Panzer Armies (T313), Corps (T314), Divisions (T315), and Rear Areas, Occupied Territories, and Others (T501).

Guide No. 73 (designated Part XIII of the Guides to German Army Divisions--Parts I-XII being Guides 41, 45, and 63-72) describes the records of divisions numbered 328 through 369 reproduced on 106 rolls of NARS Microfilm Publication T315. The records include material on activation, formation, and training in Germany, 1940-43, in Poland in 1940, France, 1942-43, and in Denmark and Italy in 1943; occupation and security duty, training, defensive operations, and coastal defense in the Netherlands, Belgium, and France, 1940-44; combat preparations and training in Lithuania in 1941; the campaign against the Soviet Union, 1941-44; offensive and defensive operations in Tunisia, 1942-43; operations against partisans and security in Yugoslavia, 1941-43; occupation and security duty, coastal defense, and defensive operations in Italy, 1942-45; training and security duty in Denmark,

1943-44; and offensive and defensive operations and coastal defense in France, Belgium, the Netherlands, Luxembourg, Poland, Latvia, Rumania, and Germany, 1944-45.

The INDEX to Guide No. 73 can be found immediately following the instructions for its use on page 190. It is primarily an archival index to this descriptive finding aid and only indirectly to the microfilmed documents it describes. Any attempt to index the massive contents of the documents themselves in the comprehensive manner of a book index would so encumber and bloat the index as to make it difficult to use. The master copy for this index was computer formatted and printed from terms input simultaneously with the descriptive material in the text of the guide, and was supplemented with references, cross-references, and explanatory subheadings. The full edition was then reproduced from the master copies by photographic offset printing.

The provenance to which each record item is attributed is the unit headquarters that created or filed it, although a large proportion of the items had in fact already been retired to depositories of the Heeresarchiv Potsdam, where accession numbers were assigned and stamped or written on the covers in the order received, and where the records were then cataloged by unit. The records reached the United States still roughly arranged by unit, since Allied intelligence officers retained this system, taking advantage of the circumstance that the original Potsdam catalogs were acquired along with the seized field command records. The AHA and the National Archives also followed this arrangement in their joint and separate microfilm projects, although some record items appear out of sequence because they were still classified or temporarily unavailable at the time the unit records were filmed. This also accounts for the occasional break in continuity of roll numbers in the guides where those unit records filmed later on higher roll numbers appear out of item number sequence at the end of the division entries. Record items not yet retired to the Heeresarchiv depositories at the time of capture were assigned accession numbers above 75,000 by American custodians in extension of the original Potsdam numbering scheme.

Considerable information on the fate of German military archives during World War II, including documentation of efforts to reconstruct records destroyed in several wartime fires, may be found in the files of the Chef des Heeresarchivs, OKH, filmed as Microfilm Publication T78, rolls 1-38, and described in Guide No. 12 of this series.

Although the records of these divisions have been filmed selectively, the war journals (Kriegstagebuecher) and activity reports (Taetigkeitsberichte) and their annexes (Anlagen) of the operations (Ia) and intelligence (Ic) staff sections, wherever available, were filmed in their entirety. A few records of the supply, administrative, medical, personnel, and judge advocate staff sections assigned to division headquarters were filmed for those units whose operations and intelligence files were incomplete or missing. Map annexes (Kartenanlagen), consisting exclusively of large maps difficult to put on microfilm, were generally omitted; maps interspersed among and integrated with the textual records were filmed in several overlapping sections, which, along with the loss of color markings, detracts considerably from their value and ease of use.

A unit history in tabular form precedes the file item listing for each division. The DATE column gives the opening date or first date on a pertinent document for the LOCATION and ACTIVITY given in the next two columns, and the timespan extends to the next date given. The CHAIN OF COMMAND column gives the names of the commanding officers and superior units, with timespans for each, where available.

These unit histories are based on information found in the records, in the Potsdam catalog, on contemporary German daily situation maps, and in manuscripts of the Foreign Military Studies series. They supplement or correct the brief histories, based on the Order of Battle of the German Army (War Department, Washington,

D.C., March 1945) which were filmed at the beginning of every roll reproducing the records of each unit. A data card describing each record item was also microfilmed immediately preceding the folder it describes, and the cards for all folders on one roll of film were again filmed as a finding aid at the beginning of that roll. The information contained on these cards was used as a reference in compiling descriptive entries for the guide, but considerable revision was undertaken because so many of these card descriptions were prepared hastily to keep pace with the filming and restitution schedules.

The CONTENTS column on the pages containing records descriptions provides (a) the abbreviation of the staff section that originated the document, (b) the title appearing on the folder cover, and (c) additional information providing a general description of the contents. The inclusive dates of the file item are given under a DATE column; the ITEM NO. is the identification symbol given on the original folder; the ROLL refers to the sequence of the film in Microfilm Publication T315; and 1ST FRAME gives the frame number of the first page of the file item.

The original records, filmed and unfiled, have been returned to the Federal Republic of Germany for deposit in the Bundesarchiv-Militaerarchiv in Freiburg. The master negatives of Microfilm Publication T315 have been deposited with the Publications Sales Branch (NEPS), National Archives (GSA), Washington, DC 20408, from which copies of specific rolls may be purchased. Reference copies may be consulted in the microfilm reading room of the National Archives. For suggestions for citing microfilm, see page xiv.

The descriptions in this guide were prepared by Anton F. Grassl, Petronilla Hawes, Harry E. Rilley, and Donald E. Spencer. Mrs. Hawes also prepared the input data for the computer. The computer input scheme a modification of the SPINDEX program, was devised by the undersigned.

SUGGESTIONS FOR CITING MICROFILM OF CAPTURED GERMAN AND RELATED RECORDS
IN THE NATIONAL ARCHIVES OF THE UNITED STATES

The National Archives and Records Service is frequently asked to provide recommendations regarding information to be included in footnotes or other references to records among its holdings. The following suggestions should serve this purpose and also help our staff in locating the records thus cited.

Records

Because of the great variety and complexity of some archival material, there are no convenient models that would be applicable to all records. The initial citation, however, might consist of those of the following elements applicable in each instance: item, file unit, or subseries, series title, originating office (and the administrative units of which that office is a part) name of collection or record group number and title, and depository. Except for placing the cited item first, there is no general agreement on the sequence of the remaining elements in the citation. Publishers, professional journals, and graduate faculties all prescribe their own style. Whatever sequence is adopted, however, should be used consistently throughout the same work. If in doubt, the researcher should confer with an archivist regarding elements that may be necessary to identify adequately specific records being cited.

Microfilm Publications

Citation to records reproduced in National Archives microfilm publications should provide, in general, the same information as suggested above, but with sufficient additional information to identify the particular microfilm publication as well as roll and frame numbers, if applicable.

Microfilm publications of foreign records seized during World War II involve such peculiarities of identification that largely individualized suggested systems of citation have been developed for them. The following examples suggest both a form of initial citation and of subsequent citations of the same document for each of five major microfilm projects reproducing captured German and related records; the form for the bibliography, which is not illustrated below, could be some appropriate modification of the initial citation, but should also include the National Archives record group title and number, and the title and number of the microfilm publication, e.g., National Archives Collection of World War II War Crimes Records (Nuernberg), Record Group 238, U.S. v. Otto Ohlendorf, et al., Microfilm Publication M895, 38 rolls; National Archives Collection of Foreign Records Seized 1941- , Record Group 242, Records of the Reich Ministry of Economics, Microfilm Publication T71, 148 rolls.

Item numbers such as EAP 173-a-10/22a, or OKW 1015 are optional and serial numbers unnecessary. Frames are sometimes unnumbered.

2. Foreign Ministry Archives and records of the Reichskanzlei filmed at Whaddon Hall.

Initial citation:

The serial number is the essential identification, whether the serial is of the interchangeable unlettered or H serials, or of the B,C,F,K,L, and M serials. The terms reel, container or roll are acceptable variations, with the last preferred by the National Archives. With the Tripartite Project microfilm, National Archives Microfilm Publication T120, it is imperative to distinguish between serial and roll numbers, and the Catalog of Files and Microfilm of the German Foreign Ministry Archives, 1920-1945, 4 vols., has as a supplement to each volume, a National Archives serial-roll conversion list. The Public Records Office in London uses the same serial and frame numbers, although not always the same roll numbers, and the microfilm publication symbols GFM 2-5 instead of T120, to identify the Tripartite Project microfilm. The other Whaddon Hall microfilm projects use the same number for serial and roll, as the SA (Saint Antony's College project) serial example, given above, indicates; the National Archives has substituted microfilm publication number for project symbols.

3. Records from the German Naval Archives microfilmed for the United States Navy at the Admiralty, London.

Initial citation:

Subsequent citations:

PG 64856, T1022/650.

PG number is the essential record item number; either the TA number or the T1022 roll number is sufficient microfilm identification. There are no frame numbers in this microfilm publication.

I N D E X

This index was computer formatted and printed from terms input simultaneously with the descriptive material in the foregoing text of the guide. The ultimate objective of producing cumulative indexes dictated certain limitations on the format, structure, and nature; further complications were created by the need to cope simultaneously with two languages, abbreviations, page location of descriptive materials, and microfilm roll and frame locations of the records described.

Format

Economy of space and ease of reading seem sufficient justification for the asymmetry of the broad horizontal layout of the descriptive text of the guide and the narrow vertical format of the index.

Language

While the index does not pretend to bilinguality, it refers to the records in their original German terminology as well as in generally accepted English equivalents, using the original German word or its abbreviation as the index term and the English word as a cross-reference term. For purposes of automation, the diphthong is used instead of the Umlaut, so that "Büffel" becomes "Bueffel," for example.

Geographical Terms

Geographical terms are mainly rendered in the native language, but for transliteration from the Cyrillic alphabet the English rendition found in the NIS (National Intelligence Survey) Gazetteer (Office of Geography, Department of the Interior, Washington, 1955-64) is used, rather than the German-language transliteration found in the records. Discrepancies between place names used by the German creators of the records and accepted English language usage are generally indicated.

Cross-References

In order to take advantage of the cumulative and repetitive capabilities of automatic data processing in compiling future individual and multiple guide indexes, cross-references of broad or universal application are preferred, although this sometimes results in general references to types of entries for which there may be no specific examples in the index of a particular guide; e.g., ARMORED UNITS, GERMAN, gives cross-references to index headings under which all echelons of such units may be found, but there is no specific entry in this index for PzAOK 4.

Units and Commands

In order not to encumber the index with a multiplicity of additional entries, the records of the units described in this guide were not listed separately under the unit number. Instead there is only a reference to the first page of the unit history, which lists all of the rolls on which that unit's records are reproduced, and which is followed immediately by an item-by-item description of such records.

All of the field command unit designations are indexed in official or recognizable German abbreviations, with the exception of the corps, where infantry, armored, mountain, and special corps are all grouped under the prefix AK (Armeekorps), followed by the specific unit name or number and a suffix denoting the type. Since the computer sorts Roman numerals alphabetically rather than numerically, the conventional German sequence for a corps designation was reversed and the number converted to Arabic, e.g., XVIII AK becomes AK 18. The "Item No." for all field command record items is a combination of the last designation of the provenance unit with the accession number assigned during World War II by the Heeresarchiv Potsdam.

Span Dates and First Frames

The years, months, and days under the "Dates" heading are the span dates of the entire record item (or unit history) listed under the corresponding "Item" heading, rather than the specific date or dates of each index entry. Similarly the "1st Frame" is the first frame of the entire record item, rather than the exact frame location where reference to that index entry begins. An attempt to give specific dates or an exact microfilm frame location for each entry would produce an index cumbersome to the point of uselessness as a finding aid. It seems more purposeful and economical of time for the researcher to proceed in sequence from index term to unit history and/or to the record description, then to the microfilm roll and first frame reproducing the record item, and thence to searching out the particular frame or frames containing the specific reference indicated by the index entry. Such "narrowing down" or "bracketing-in" is, of course, a customary research practice.

WEHRKREIS				
(Wehrkreise were German army districts responsible for recruitment, training, and replacement of army units. Originally there were seven Wehrkreise, but after Hitler repudiated the Treaty of Versailles restriction on the size of the Wehrmacht, and with German territorial expansion, the number grew to seventeen, not including the Reichsprotektorat and the Generalgouvernement.)

INSTRUCTIONS FOR ORDERING MICROFILM

National Archives Microfilm Publication T315, Rolls 2050-2157
Records of German Field Commands: Divisions (328th-369th), Part XIII

Microfilm copies of one or more rolls of microfilm may be purchased at the current price of \$12 a roll. This price includes postage or shipping costs on orders sent by surface mail within the United States or to Mexico or Canada and on small orders sent to other countries. Additional costs for air mail shipment will be quoted on request. Orders of 40 rolls or more sent to foreign countries other than Canada or Mexico are subject to an added 5% shipping charge.

Checks or Money orders for microfilm should accompany the order. They should be made payable to the General Services Administration (NEPS) and should be sent to the Cashier, NARS, GSA, Washington, DC 20408. Persons ordering microfilm from outside the United States or its possessions should make their remittance by international money order or check drawn in United States dollars on a bank in the United States and payable to the General Services Administration (NEPS). Each order should specify Microfilm Publication T315, the roll number or numbers, and the price.

The National Archives microfilm publication program is financed from a trust fund established by the National Archives Trust Fund Board Act (44 U.S.C. 2307). The act permits the preparation and reproduction of source materials for a price covering their cost plus 10 percent. Proceeds from the sale of microfilm are deposited in the trust fund account from which microfilm expenses are paid. The excess above costs is used to expand reproduction facilities, explore new techniques of reproduction, and microfilm additional records.

The current price of microfilm reflects the second general price increase in 25 years. It is the policy of the National Archives to raise prices only when it is necessary to maintain the solvency of the revolving fund. The increased prices at this time are brought on by increases in the cost of film stock and chemicals, boxes and reels, and postage, as well as by salaries. A fixed price per roll has been established because most of the costs of reproducing and selling microfilm are the same for all rolls of film, regardless of length, and the establishment of such a price permits a substantial saving in order-processing costs.
